ABSTRACT

Data presented were made available through the cooperative efforts of the State Education Department and the responding institutions, the principal data source being the computerized Postsecondary Information System's DATACORE. This document demonstrates some of the system's capabilities in displaying basic enrollment data. Three approaches are used here to display data, each providing a different perspective on enrollment patterns and trends. Some of the general findings are as follows: total state enrollment reached an all-time high in 1975 of nearly one million students; both full-time and part-time undergraduate enrollments increased, but part-time enrollment grew more rapidly; full-time graduate enrollment increased slightly, while part-time enrollment decreased slightly; the State University and private sector enrollments increased at about the same rate, while City University enrollments decreased; private and state community colleges experienced substantial increase in both full-time and part-time undergraduate enrollments; private engineering technical colleges grew substantially in enrollments; and the proportion of New York State high school graduates going on to postsecondary education in the state has remained stable over the first half of this decade. The report also provides detailed data on individual institutions. (Author/LBH)

Documents acquired by ERIC include many informal unpublished materials not available from other sources. ERIC makes every effort to obtain the best copy available. Nevertheless, items of marginal reproducibility are often encountered and this affects the quality of the microfiche and hardcopy reproductions ERIC makes available via the ERIC Document Reproduction Service (EDRS). EDRS is not responsible for the quality of the original document. Reproductions supplied by EDRS are the best that can be made from the original.

FOREWORD

This report launches a new series of analytical reports to be prepared by the Office of Postsecondary Research, Information Systems, and Institutional Aid. Based on data collected by the New York State Education Department, this first report examines higher education enrollment patterns in New York State. It has two purposes: to present and analyze enrollment data from a number of different perspectives, and to encourage institutions to examine their own relative positions by using these data and perspectives.

Data presented in this report were made available through the cooperative efforts of the Education Department and the responding institutions. The principal data source is the New York State Higher Education Data System (HEDS), specifically the key data elements included in the "Postsecondary Information Systems DATACORE," being developed by the Office of Postsecondary Research, Information Systems, and Institutional Aid. The computerized DATACORE system will make it possible to provide the Department and others with timely information about postsecondary education in the State. This document demonstrates some of the system's capabilities in displaying basic enrollment data. As DATACORE is expanded and refined, it will provide similar capabilities in other areas as well.

These data, and perspectives for their application, provide a framework for institutions in discerning trends of significance and in developing plans for the future. The data in the appendixes can be used by individual institutions to assess in more detail their relative positions within the overall postsecondary system of the State. Institutional self-assessment will become more important as the number of high school graduates declines and as competition for students becomes more intense.

D. Ross Thomson and David A. Waters had the primary responsibility for preparing the report. Thanks are also due to Mark P. Riley and Margaret R. Norton for the support that they provided.

INTRODUCTION

Postsecondary education in New York State is experiencing increased financial pressures related to the fiscal circumstances of both the State and Nation. Competition among postsecondary institutions for students is also increasing, as the number of high school graduates begins to decline. Within this context of competition for both resources and students, enrollment statistics are probably the best indicators of institutional performance. This report illustrates the basic historical enrollment data as indicators of growth or contraction.

Three aggregations of enrollment data are shown: statewide, regional, and sector/institutional type. Combinations of these levels of aggregate data also have utility. In addition, institution-level characteristics and data are provided as a means for further analysis by individual institutions in evaluating their own situations, according to what is significant for their own purposes and positions within the State's postsecondary education community.

The report is organized as follows: the first section, General Perspectives, offers a broad view of enrollments for the first half of the decade, which provides a general backdrop for viewing future directions. The second section, Market Share, applies a business concept to postsecondary enrollments for regions and different types of institutions. The third section, Residence and Migration, analyzes the dynamics of student flow among regions and types of institutions. The final section is a synopsis of the entire report. Pertinent data are provided at the end of each section. In addition, two appendixes provide explanations of selected institutional characteristics and present specific enrollment data for individual institutions.

GENERAL PERSPECTIVES

The total number of students attending degree-granting institutions in New York State reached almost one million in fall 1975. This represents an all-time high in enrollment and an increase of over 275,000 (39 percent) since fall 1969. As shown in table 1, enrollment has expanded at all levels of postsecondary education. Full-time undergraduate enrollment grew from just under 400,000 students in 1969 to over 548,000 in 1975, an increase of almost 38 percent. During the same period, full-time graduate and first-professional enrollment increased by more than 11,000 (23 percent) to more than 63,000.

Figure 1 illustrates the relative growth in both full-time and part-time undergraduate and graduate enrollments for each year between 1969 and 1975. Most significant is the greater proportionate increase in part-time undergraduate over full-time undergraduate enrollment — 56 versus 38 percent.

A more detailed look at enrollments for 1974 and 1975 is provided in tables 2A (undergraduate) and 2B (graduate), which show enrollments by sector and type of institution.* At the undergraduate level, part-time enrollment has grown more rapidly than full-time enrollment — an average rate of increase of 10 versus 6.6 percent. This pattern is reflected in each of the three sectors (State University, City University, and private). In contrast, full-time graduate enrollment increased statewide, while part-time enrollment actually decreased. The State University and private sectors reflect this pattern, whereas the City University showed a decline in both full-time and part-time graduate enrollment.

---

*The institutional typology used for this report is shown in appendix A, table A-1.

Most types of institutions have experienced growth in enrollment between 1974 and 1975. Undergraduate increases in both full-time and part-time enrollment are noted for the State University community colleges, private engineering-technical colleges, and private 2-year colleges; the State University statutory colleges, university colleges, and agricultural-technical colleges gained in part-time enrollments. The State University health sciences centers increased in full-time enrollment and declined in part-time enrollment. Undergraduate decreases occurred for the City University community colleges in full-time enrollment and the seminaries in part-time enrollment.

Overall, the private 2-year colleges led in undergraduate enrollment growth. However, this is partially balanced by the fact that, for 1975, these institutions enrolled only three percent of the full-time and two percent of the part-time undergraduates in the State. Next in rate of growth were the private engineering-technical colleges, with substantial increases in both full-time and part-time enrollments.

Graduate increases in both full-time and part-time enrollments are noted for the State University specialized colleges and private colleges; the private engineering-technical colleges gained in full-time enrollments and the State University health sciences centers and seminaries gained in part-time enrollments. The State University specialized colleges gained in full-time enrollment, whereas the private specialized colleges declined; the State University health sciences centers gained in part-time enrollment, whereas the private health sciences centers declined. Graduate decreases occurred for the City University senior colleges, with relatively high proportionate losses in both the full-time and part-time categories.

Overall, the full-time graduate enrollment growth of the private engineering-technical colleges and the total enrollment decline of the City University are the most apparent trends to be noted.

It is emphasized that the undergraduate enrollment growth shown in figure 1 and tables 1 and 2A reflects an increase in the number of high school graduates, rather than an increase in the preference of people for college. Figures from the Department's Basic Educational Data System show a relatively constant proportion of New York State high school graduates going on to postsecondary education in the State during the first half of the seventies. Since the number of high school graduates began to decline in 1976, and will decline substantially over the next 15 years, institutions cannot depend on the former trend to sustain their enrollments.*

*The New York State Education Department will release revised enrollment projections as part of the Regents 1976 Statewide Plan for the Development of Postsecondary Education. Chapter 2, "Higher Education Enrollment in the 1980's: Declining Expectations" will provide both enrollment projections and interpretations.

MARKET SHARE

The concept of market share may, with discretion, be useful for observing trends in postsecondary education. If applied to enrollment shifts between the public and private sectors, for example, it might describe some of the competition for students. It could also be applied to specific types of institutions, such as law schools, to illustrate how well each is attracting students.

While competition for students will, for specific institutions, be translated into competition with a relatively small set of competitors, it is not an objective of this report to heighten tensions that may exist in this regard. To minimize such a possibility, this section deals with fairly large groups of institutions, with responsibility left to the reader to determine implications for individual institutions.

Two sets of market share statistics are presented. Table 3 shows the share of statewide undergraduate enrollment by geographic region and table 4 shows the share by type of institution. Both tables provide percentage share statistics for 1974 and 1975, as well as the change over the one-year period.

Regional Comparisons

When institutions of all sizes, types, and sectors are aggregated as shown in table 3, New York City realized the greatest decline in regional share of both full-time and part-time enrollments. Although some of the decline in the City University enrollments were picked up by private institutions in the New York City region, it was not large enough to prevent a net decline for the region. Whether the gains of both full-time and

part-time students in the Mid-Hudson and Long Island Regions are indicative of some migration of New York City students cannot be determined from these data.

Other regional share declines include full-time enrollment in the Central Region and part-time enrollment in the Genesee Valley and Northern Regions. Only if these declines were to continue would they begin to assume significance. The same may be said for the increasing share of part-time students in the Northeast Region.

Sector/Type Comparisons

Table 4 presents market share trend data between 1974 and 1975 for the major types of institutions. The institutional type shares are percentage distributions of each year's undergraduate enrollment (100 x institutional type enrollment/total enrollment). The changes expressed are the arithmetic differences in percentages of each institutional type's share between 1974 and 1975.

The most significant change is the decline in the City University of both full-time and part-time enrollments in both the senior and community colleges. Despite the decline in the City University's share of full-time undergraduate enrollments, the percentage change in actual enrollment declined less than one percent between 1974 and 1975 (table 2A). The market share approach accentuates the decline because of the over six percent increase in total full-time undergraduate enrollment in the State.

Other changes worth noting are the percentage increase in share of full-time enrollments at the private-engineering colleges, the percentage increase in share of part-time enrollments at the State University, especially its community colleges, and the percentage decrease in share of part-time enrollments at the City University, especially its senior colleges.

The State Education Department is studying the application of these market share concepts to the State's postsecondary education system and will be presenting more indepth analyses as they are completed. In the meantime, institutions interested in assessing their own individual performance in the "marketplace" can use the data provided in the appendixes to develop institution-by-institution market share statistics. These statistics may help institutions to identify problem situations and provide insights on how to attract students more effectively.

RESIDENCE AND MIGRATION

Another approach to assessing institutional performance in attracting students is examination of the residence and migration of full-time first-time students. In this report, the term "residence" refers to the New York State region of home residence of specified students, and "migration" refers to the movement of students from their home regions to the regions where their institutions are located. These migration patterns provide additional insights about the student markets being served by institutions.

Available data reflect movements of students within the State and immigration of out-of-State and foreign students. For a more complete study of student migration, it would be desirable to have supplementary information on the cost of attendance, geographic origin of past enrollment, transfers and attrition, and program choices; however, these basic data allow a number of preliminary analyses.

Regional Comparisons

Table 5 presents data on the origin and destination of first-time* undergraduates for 1972 and 1974. Linear correlations of 0.99 for student origin and institutional location indicate little structural change between the two years. Slight variations in regional changes can be seen, however.

Origin and destination data for fall 1974 show that two regions in the State — New York City and Western (Buffalo) — provide the greatest "regional service" with 84.8 and 82.0 percent of all enrollees coming from the home region. Generally, the more urbanized the area, the higher the percentage of residents attending institutions in the area. Regional enrollment

*This section refers only to full-time first-time students.

data are shown below:

REGENTS REGION (in descending order of 1974 percentages)	REGIONAL ENROLLMENT (percentage of enrollment from same region) Fall 1972	Fall 1974
New York City	86.6%	84.8%
Western	80.2	82.0
Northeast	70.9	69.4
Central	66.5	65.0
Long Island	63.3	62.9
Northern	61.7	61.9
Genesee Valley	61.9	60.2
Mid-Hudson	58.9	54.1
EIGHT-REGION AVERAGE	68.8%	67.5%

Table 6 displays the regional figures for origin and destination in both 1972 and 1974 for full-time first-time undergraduate students. Institutions may wish to derive particular statistics for their own regions, as related to their specific concerns. For example, figures in the following paragraph are derived from table 6.

While only 15.2 percent of New York City resident students migrated, this represents 19.5 percent (7099) of all of the 36,357 students who migrated from their home region to other regions. A combined total of almost two-thirds (22,838) of these migrating students came from the Long Island, New York City, and Mid-Hudson regions, with 36.3 percent of the migration taking place among the three regions themselves. Individually, the Mid-Hudson and Long Island Regions appear to be low in "regional service." However, if the three-region metropolitan area is aggregated, 83.1 percent of the total area enrollment came

from the area. The lower percentage of locally enrolled, first-time students for the Mid-Hudson reflects outmigration to three neighboring regions: Central (15.1 percent), Northeast (9.3 percent), and New York City (9.7 percent), i.e., one-third of the first-time enrollees.

Another index of drawing power is the percentage of each region's enrollment from other regions in the State, as shown below:

REGENTS REGION (in descending order of 1974 percentages)	EXTRAREGIONAL ENROLLMENT (percentage of enrollment from other regions)	
	Fall 1972	Fall 1974
Northern	61.6%	67.8%
Central	59.4	63.6
Genesee Valley	40.5	44.0
Northeast	39.7	40.8
Western	27.6	28.4
Mid-Hudson	32.4	28.2
Long-Island	12.3	15.1
New York City	8.3	8.0
EIGHT-REGION AVERAGE	35.2%	37.0%

Sector/Type Comparisons

This subsection examines residence and migration data for first-time undergraduates within the context of institutional control. The following definitions are herein adopted as qualitative descriptions, based on regional residence and migration data.

Regional - draws principally from the region in which located; may be local and draw predominantly from the county of location

(or counties of sponsorship in the case of some community colleges).

Interregional - draws students from regions other than the region of location; predominantly draws from home region and bordering regions.

Statewide - draws students from across the State.

Extrastate - draws students from across the State and from outside the State.

In the analysis that follows, empirical delimitors were used to categorize institutions by the degree to which they serve their region of location. Only the general sector and institutional type findings are presented here.

The first observation is that the City University is regional, with no campus drawing less than 95 percent of its enrollees from the City. Senior campuses draw 98 percent and the community colleges 99 percent from New York City for an aggregate of 98.6 percent. Of all first-time students having original residence in the New York City region, 70.6 percent enrolled in the City University.

State University campuses split rather neatly into regional service and statewide service groups based on the percentage of their enrollments from the home region, with 29 units above the mean percentage of 61 and 30 units below the mean; a gap of 13.5 percentage points, in which no State University institution falls, ranges from 57.7 to 71.1 percent.

The same indicator does not provide a clear delineation for the private institutions. Even using the standard institutional typology, no clear breaks between categories became evident that would permit the private institutions to be categorized with confidence.

In assessing dependence on the local pool of potential students, several observations need to be made. Some institutions are local by choice or by policy. The City University is understood to be a "local" institution drawing from the City population. The community colleges — whether those of the State or City universities — also tend to be local as a matter of policy; they provide the local service that was the original purpose for their development. Institutions drawing heavily on a local area may face special problems as the number of high school graduates declines. Table 7 displays data showing the 1972 and 1974 proportions of first-time students from a region to high school graduates from the same region.

Table 5. PERCENTAGE DISTRIBUTIONS OF FULL-TIME FIRST-TIME STUDENTS BY STUDENT ORIGIN AND BY INSTITUTIONAL LOCATION

Fall 1972 and Fall 1974

Region	Student Origin			Institutional Location		
	1972	1974	Change	1972	1974	Change

SYNOPSIS

This report provides data on New York State enrollment patterns in recent years. Three approaches are used to display data, each providing a different perspective on enrollment patterns and trends.

Some of the general findings are as follows:

- -- Total State enrollment reached an all-time high in 1975 of nearly one million students.
- -- Both full-time and part-time undergraduate enrollments increased, but part-time enrollment grew more rapidly.
- -- Full-time graduate enrollment increased slightly, while part-time enrollment decreased slightly.
- -- The State University and private sector enrollments increased at about the same rate, while City University enrollments decreased.
- -- The Mid-Hudson Region increased its percentage of the State's full-time undergraduates, while the percentage for the New York City Region declined.
- -- The Genesee Valley Region increased its percentage of the State's part-time undergraduates, while the percentage for New York City Region declined.
- -- The State University and private sectors increased their percentages of the State's full-time and part-time undergraduates, while the percentages for the City University declined.
- -- The New York City Region had the highest percentage of regional enrollment, while the Northern Region had the highest percentage of extraregional enrollment.

- -- The private 2-year colleges and the State University community colleges experienced substantial increases in both full-time and part-time undergraduate enrollments.
- -- The City University community colleges experienced decreases in full-time undergraduate enrollment and the City University senior colleges in both full-time and part-time graduate enrollments.
- -- The private engineering-technical colleges grew substantially in full-time and part-time undergraduate and in full-time graduate enrollments.
- -- The proportion of New York State high school graduates going on to postsecondary education in the State has remained stable over the first half of this decade. (See table 8.)

In addition to these general findings, the report provides detailed data on individual institutions in the appendixes. These can be used by individual institutions for institutional self-assessment and planning, to analyze their own circumstances more carefully.

APPENDIX A

Selected Institutional Characteristics

SELECTED INSTITUTIONAL CHARACTERISTICS

The information system used by OPRISIA* includes a number of standard "institutional characteristics" — items intended to provide relatively stable descriptors of each institution. Such descriptors facilitate not only data retrieval, but also data presentation and analysis.

The five basic institutional characteristics used in this report are presented, by individual institution, in table A-3. All institutions reporting data in any year from 1969 to the present are included; this includes several schools that are currently nonoperational.

Each of the five selected institutional characteristics is described as follows:

Type of Institution: Table A-1 lists the complete institutional typology. The category "Public-Special" was created to allow classification of the U.S. Military Academy at West Point, the U.S. Merchant Marine Academy at Kings Point, and the Regents External Degree Program. The categories under the State University of New York (SUNY) and The City University of New York (CUNY) are those developed by the respective public university systems. The categories under the private institutions were developed by the New York State Education Department: unique academic characteristics identified the five types coded 2050 through 2090; expenditures were then used to delimit the four types 2010 through 2040.**
